## Greek Characters

As with special characters an html code must be used to enter a Greek character. Find the corresponding code from the description below and enter the code (as specified with a semi-colon at the end) in place of the character.

For example, to enter the Greek small letter tau,  $\tau$ , in the title of a publication, you would enter **&#964;**  
When the publication is saved, the tau letter will then appear in the title.

Please note that these Greek characters will only be viewable on web browsers compatible with HTML 4 and above (eg: Internet Explorer v5 and above, Navigator v6 and above). Lower versions of browsers will show the unrecognised character as ? or 1.
