After a password change, use this guide to update your devices where needed.
This guide applies to Windows Operating systems that are connected to the VPN.

If you have updated your password while connected to the University VPN service, IT Services recommend you complete the following steps.

**Eduroam**
- Disconnect the VPN session once your password has been updated
- Log back into the VPN software using your updated password
- Lock your computer with **CTRL + ALT + Delete** and select **Lock**
- Log back into your computer with your new password

You have successfully updated your password for this service.
This guide applies to Windows Operating systems that are connected to the University network.

**Eduroam – Windows 10**

- Open the list of available wireless networks
- Left-click on **Eduroam**
- Click **Disconnect**
- Click on **Eduroam** and click **Connect**
- Login with your primary email address and updated password

You have successfully updated your password for this service.
Windows Operating System

This guide applies to Windows Operating systems that are connected to the University network.

Eduroam – Windows 7 and Windows 8.1

• Open the list of available wireless networks
• Right-click on Eduroam
• Click Forget this Network
• Right-click on Eduroam and click Connect
• Login with your primary email address and updated password

You have successfully updated your password for this service.
