ORDER FORM OVERLEAF

Farm forestry: A technical and business handbook

\$35.00 plus postage

This comprehensive, straightforward, practical guide to farm forestry is designed for people who just want to get on with the business of growing and marketing trees, as well as for foresters and forest advisers. Fully illustrated with simple drawings and diagrams, it is written in language that farmers with little or no background in farm forestry will find familiar and easy to follow. Spiral bound with coated pages that will survive a shower of rain, it's a book you can chuck in the back of the ute for on-site guidance.

The book's 41 chapters over 260 pages – each including a summarising SHAPSHOT – cover all the essential farm forestry topics. There is a Tasmanian focus, but the handbook applies to a wide range of temperate Australian locations.

Farm Forestry is divided into three parts. **Part 1, The business of farm forestry**, covers financing, certification, estate planning and the forest practices system. **Part 2, Managing native farm forests**, is about native forest silviculture, species and marketability, use of fire, forest health, biodiversity and conservation. **Part 3, Plantation forests on farms**, covers such topics as site preparation, weed control, fertilisers, matching species to site, pruning and thinning.

This is a rare opportunity to own Australia's best practical guide to farm forestry that will be your 'bible' throughout the life of your tree crop. Order your copy now by completing the details below and

- **MAILING TO School of Plant Science, University of Tasmania, Private Bag 55, Hobart Tas 7001**
