

EndNote and Web of Knowledge Databases

Importing records from **Web of Science**, **CAB Abstracts**, **Inspec** or **Current Contents** databases can be done directly without the need for an EndNote filter.

There are two methods of exporting records

Option 1 (To export records page by page)

- Perform a search within a **Web of Knowledge** database
- Mark the records you require
- Click on the **More options** link at the top or bottom of the results list to view the EndNote export options
- Ensure **Selected records** button is selected
- Ensure that the **Full Record** button is selected and the **plus Cited Reference** box is ticked
- Click on the **Save to EndNote, RefMan, or other reference software** button. EndNote will engage.
- EndNote will present a *Select a Reference Library* dialogue window. Select your library and click **Open** (you must do this even when your library is already open)

Your database records should now be displayed in EndNote.

Option 2 (To export records from various results pages using the MARKED LIST)

- Perform a search within a **Web of Knowledge** database
- Mark the records you require
- Click on **Add to Marked List** button
- Click on **Marked List** link at top of the screen

On the **Marked Records** page

- Select the fields you want downloaded into your EndNote library
- Click on the **Save to EndNote, RefMan, or other reference software** button. EndNote will engage.

The screenshot shows the 'Web of Science Marked Records' interface. At the top, there is a navigation bar with '<< Leave Marked List' and 'Web of Science Marked Records'. Below this is a search bar with 'Web of Science' and a 'Go' button. The main content area is titled 'Web of Science Marked Records - 5 Articles' and includes a 'Delete This List' button. The interface is divided into two steps: 'Step 1. Select the fields to include in the output.' and 'Step 2. Select an option.' Step 1 features a grid of checkboxes for various fields: Author(s), Title, Source, abstract*, language, document type, keywords, addresses, cited references*, cited reference count, times cited, publisher information, ISSN, source abbrev., page count, and IDS number. Step 2 offers options like 'Format for Print', 'Save to File', 'Save to EndNote, RefMan, or other reference software', and 'Save to My EndNote Web'. There are also input fields for 'E-mail records to:', 'Return e-mail (optional):', and 'Notes (optional):', along with a 'Plan Text' dropdown and an 'E-mail' button. A checkbox at the bottom allows for 'Automatically delete selected records from the Marked List after output is complete.'

- EndNote will present a **Select a Reference Library** dialogue window. Select your library and click **Open** (you must do this even when your library is already open)

Your database records should now be displayed in EndNote.
