The virtual and mixed reality technologies at the Human Interface Technology Laboratory (HIT Lab AU) provide exciting study opportunities in creative design, visualisation, simulation and interactive entertainment. You can undertake a HIT major in the Bachelor of Computing or combine HIT studies with many other course areas including visual & performing arts, architecture, human life science, education, nursing and the Australian Maritime College. The HIT Lab AU at the Launceston campus is one of only three similar centres in the world and provides extensive study and project opportunities for students with any background or interest. If you want to play a part in the future, the HIT Lab AU is your way forward.
