Practice Task 1

What is the size of angle COB?

Check: Did the two angles add up to 180°?

$AB$ is a straight line, so the straight line angle $AOB$ is $180°$.

$140° + \text{COB} = 180°$

$\text{COB} = 180° - 140°$

$\text{COB} = 40°$
