**Practice task 1**

1. Choose the most appropriate unit of length from millimetres (mm), centimetres (cm), metres (m) and kilometres (km) for the following tasks. Think about where precision is important.
   a) Measuring the length of timber when constructing a picture frame. 
      mm would be the most appropriate measurement
   b) Measuring the space between vegetable seedlings when planting. 
      cm would be the most appropriate measurement
   c) Giving directions for driving from Sydney to Melbourne. 
      km would be the most appropriate measurement
   d) Measuring a length in your backyard to set up a cricket pitch for a family game. 
      m would be the most appropriate measurement

2. Measure the length of a sheet of A4 paper. Give the answer in:
   a) millimetres 297mm
   b) centimetres 29.7cm
   c) metres 0.297m
