

YOU DON'T NEED AN ELECTRICAL ENGINEERING DEGREE TO TURN OFF A SWITCH.

LIGHT/APPLIANCE

Switch off unnecessary lights and appliances

Lighting is responsible for about 20% of all energy use here at UTAS. A reduction of just 10% in lighting energy consumption would save about \$100,000 per year. So remember to switch off lights and appliances.

MONITOR

Switch off computer monitors when not in use

Switching off computer monitors across UTAS instead of leaving them on with a screen-saver going can save enough energy to power 24 Tasmanian homes for a whole year.

PRINTER/COPIER

Activate energy save mode

Printers and photocopiers spend a lot of time sitting idle. By activating the energy save feature on just one machine for a year, you could save the same amount of energy it takes to drive a car between Hobart and Launceston. And back.

HEATER

Turn down the heater

Reducing the thermostat by just 1°C across UTAS would save enough energy to power the entire Inveresk campus or the Centre for the Arts for a whole year.
