\* Specialisation available to combine core studies with another field of study.

### Tan Duc Nguyen

Master of Applied Science (Marine Environment)  
with honours

"I did the Introductory Academic Program at the University of Tasmania in Hobart when I first arrived and that has proven to be very useful. Studying at IMAS has definitely also exceeded my expectations. I came here thinking I would just get general knowledge, but I've gotten far more than that. I have been given a very deep understanding, not only about aquaculture, but also in farm management and policy.

When I first came to Australia I was very nervous because I had never studied overseas before. My first class at IMAS was an amazing experience. The lecturers are so open and friendly and treat students as equals, and I think that is awesome.

The aquaculture facilities at IMAS are quite good, with very modern technology. The on-site technical staff are very friendly and have been a great help to me during my honours.

Apart from the quality education that I am receiving here, the best thing about living in Tasmania is the lifestyle. There are plenty of opportunities to socialise, both on and off campus. I enjoy watching football matches, using the Unigym and attending student barbecues.

I am currently a part of the Homestay Program and living with a very friendly Australian family. I also like to get together with a group of my Vietnamese friends on the weekend. We cook traditional food – we can find most of the ingredients we need here – and chat about our home towns. Having an outlet like this has helped me to settle in.

I have also enjoyed travelling around the State. I did some bushwalking on the East Coast, and saw snow for the first time ever at Cradle Mountain in winter. That was awesome."
