Click the button below to download the Useful Sustainability Links PDF, which includes a list of skills and knowledge for students.

Dr. Mansi says that sustainability is particularly relevant to management graduates with the skills needed to become the leaders of tomorrow. "These new leaders will make the decisions that will affect our world. They will be the makers, they are going to decide on so many things, and who knows what the world will look like in 10, 20, or 50 years from now," Dr. Mansi said that it's critical that the transformation of the world is being driven by sustainability and that universities are playing a crucial role in preparing students to shape the world they are inheriting.

There have been other changes at TSBE in the last two years. The University Chief Sustainability Officer, Corey Peterson, noted that "advancing to a Gold rating recognises the significant efforts over the last two years from our staff towards embedding sustainability on campus.

The platform will collect data on heating, cooling, water usage, lightning, and other infrastructure. Building operations contribute to approximately 40% of a university's greenhouse gas emissions. UTAS is committed to advancing sustainability on campus.

STARS was developed by and for the higher education associations for the Advancement of Sustainability in Higher Education (AASHE) STARS program is the most widely adopted framework for assessing sustainability performance in higher education. A recent study found that 65% of universities are not meeting the standards.

Signatories include the Cornell SC Johnson School of Management and the World Economic Forum. UTAS is a signatory to the Principles of Responsible Management Education (PRME) initiative, which is a collaborative effort of leading business schools to promote the responsible conduct of business and management education. UTAS is currently working on obtaining Gold status in the PRME framework, with additional changes planned for 2023.

The IT team are also focused on diverting end-of-life electronics from landfill by refurbishing and donating over 100 PCs to local charities and schools.

The platform, a data collection platform that will be implemented over the next three years, will trade off upwards of 10% in energy costs and reduce carbon emissions by 5000 tonnes per year. A student from the University of Technology Sydney has been the recipient of a PRME Research grant to continue research into sustainability on campus.

The forum will provide insights into the latest sustainability developments and industry best practices. The forum will also provide opportunities for participants to network and collaborate on sustainability initiatives.

The theme for this year's sustainability conference was "Practising Sustainability in a Time of Crisis." Over 150 participants attended the conference, which covered topics such as sustainability education, climate change, and sustainable finance. The conference was hosted by UTAS and the University of Technology Sydney, with support from the Australian Government.

The IT team have launched a new state-of-the-art waste management system at Sandy Bay, the University of Technology Sydney's main campus. The system has two bins, one for general waste and one for recycling. Participants at the conference will have the opportunity to learn more about the system and the benefits of implementing a similar system on campus.

The forum will provide insights into the latest sustainability developments and industry best practices. The forum will also provide opportunities for participants to network and collaborate on sustainability initiatives.

The forum will be held on 10th of May and tickets are available now. The conference will be held on 11th of May and tickets are available now. The conference will be held on 11th of May and tickets are available now.
