Associate Degree in Applied Technologies

specialising in

CYBER SECURITY

Do you want to protect the integrity of IT infrastructure, networks, internet and cloud based systems?
This course has been developed to create cyber security technologists who have the technical and project management skills to work across any organisation. Developed in consultation with industry, the course equips graduates with the key skills and knowledge that are important to business, such as implementing security technologies to protect against hackers or credit card fraud.

Learn from industry experts what it means to be a cyber security professional.
Taught by industry, this course combines key study areas of computer networks, IT security management, ethical hacking, and concepts and procedures for cyber security with a capstone project applying the key principles covered within the course.

Hands-on experiences to graduate work ready.
Throughout the course, students will be engaged with hands-on experience in projects connected to real world problems, learning how to apply the subject matter to the practice of discipline technology and its related technological sciences. By doing so, this course provides students with the latest knowledge and skills to make a real impact in the exciting and rapidly expanding area of cyber security.

AARON’S STORY

“Starting at the University College is one of the best decisions I’ve made in a long time. It’s fun, engaging and you get to meet heaps of new people as well as learn about the industry.”

Aaron credits the University College’s workload design as a realistic and easy way to maintain a healthy balance between work, study and life.

“It’s all going really well. I’m feeling positive studying at the University College, the content is relevant and well delivered and focuses on more hands-on, industry relevant learning, which I find much more engaging.”
