Facilitated by Professor Debra Nestel

The NHET-Sim programme is a nationwide training programme for healthcare professionals and their educators aimed at improving clinical training capacity. NHET-Sim is designed for anyone who currently or intends to use simulation as an educational method to support the development of healthcare students and professionals.

15 April: Faculty Development

The aim of the workshop is to share updates on the NHET-Sim program and the wider healthcare simulation practice and research community. Participants will have an opportunity to share their experiences in a highly participatory day.

This workshop is designed for:
- Health professionals interested in becoming a NHET-Sim facilitator to obtain their faculty status and therefore facilitate NHET-Sim workshops
- Existing NHET-Sim Faculty will update their knowledge and maintain their faculty status

16 April: S4 – Delivering technology-based simulations

This module will build on your knowledge and skills and consolidate completed modules. Each simulation facility or locality has their own standard practices, equipment and AV capabilities which will influence delivery. NHET-Sim is designed to provide a national framework and common terms so that local trainers can educate local users on how to best use equipment and facilities available locally – with some national cross-pollination to build networks and consistency. This module is intended to reflect on your local practice of running scenarios in SBE and will give an overview of terms; an introduction to the use of moulage and, the use of video for debriefing.
