EndNote and AustLit

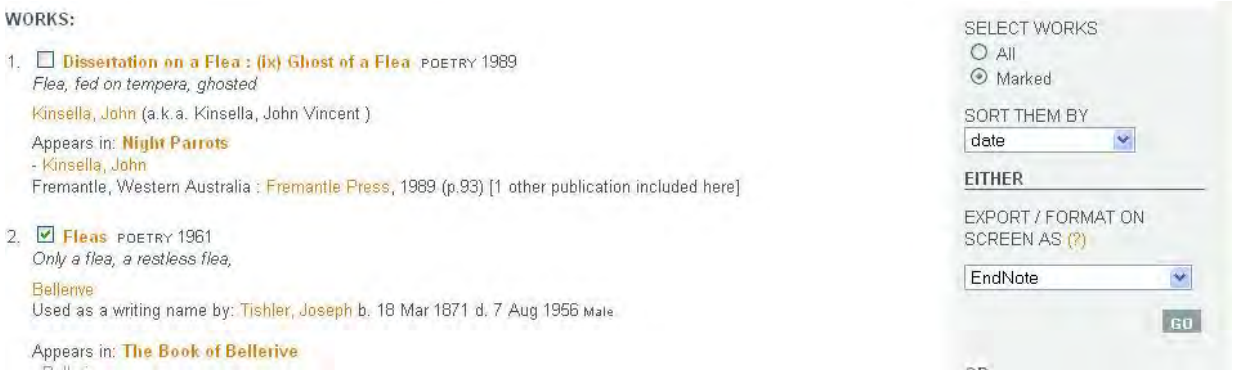
Importing records from AustLit requires the installation of an EndNote filter. This filter can be found and downloaded from the AustLit database www site at: http://www.austlit.edu.au/about/taggedFormat

The filter name supplied is *newaustlit01.enf* but it is recommended to rename the filter to *AustLit.enf* to make locating the filter easier within EndNote.

- Create a "filters" folder in your "My Documents" folder on the C: drive.
- Add the filter into your filters folder. EndNote X5 will locate the filter.

In AustLit …

1. Perform a search
2. From a list of retrieved references, mark the desired references by clicking on the checkboxes
3. On the right hand side of the results screen you will see the *SELECT WORKS* box
4. Click on the **Marked** option
5. Under the heading EXPORT / FORMAT ON SCREEN AS, select **EndNote** from the dropdown menu
6. Click **GO**



7. You are displayed an *austlitRecords.enw* window. Click on the **Open with** option
8. You may be prompted to *Select a Reference Library*
9. You may be prompted to locate the appropriate Austlit filter in EndNote
10. Your references should be loaded into your library. Your database records should be loaded into the EndNote Library you have open. If you don't have an EndNote Library open, records will be loaded into the Library you last had open
